Product idea: An app that help civil servant to manage the all documents

Product Requirements Document: CivilDoc - Document Management App for Civil Servants

Problem Statement

Local government employees often struggle with managing large volumes of documents, leading to inefficiencies in document retrieval, collaboration, and version control. This results in wasted time and potential inaccuracies. There is a need for a centralized, user-friendly platform that streamlines document management processes for better productivity and compliance.

Goals & Success Metrics

Goals

1. Improve document organization and accessibility.
2. Enhance collaboration among civil servants.
3. Ensure version control and maintain document history.
4. Enable seamless integration with existing cloud storage solutions.

Success Metrics

1. **User Adoption**: 80% of local government employees use the app within the first year.
2. **Time Savings**: Reduce document search time by 50%.
3. **Error Reduction**: Decrease document-related errors by 30%.
4. **User Satisfaction**: Achieve a user satisfaction score of 4.5/5 in quarterly user surveys.

User Stories

1. **Document Categorization and Tagging**

- As a civil servant, I want to categorize and tag my documents so that I can easily find them later.

2. **Collaboration and Sharing**

- As a team leader, I want to share documents with my team members and collaborate on them in real-time.

3. **Search and Retrieval**

- As a new employee, I want to search for documents using keywords and filters to quickly find what I need.

4. **Version Control and History Tracking**

- As a project manager, I want to track changes and maintain a history of all document versions.

5. **Cloud Storage Integration**

- As an IT administrator, I want to integrate the app with our existing cloud storage solutions to ensure data consistency and security.

Functional Requirements

1. **Document Categorization and Tagging**

- Users can create and manage categories for documents.

- Users can tag documents with multiple keywords.

2. **Collaboration and Sharing**

- Users can share documents with other team members.

- Real-time collaboration on shared documents.

- Users can set permissions (view, edit, comment) for shared documents.

3. **Search and Retrieval**

- Full-text search with keyword and filter options.

- Search results display document metadata and previews.

4. **Version Control and History Tracking**

- Automatic versioning of documents.

- Users can view and restore previous versions.

- Change logs for all document edits.

5. **Cloud Storage Integration**

- Integration with popular cloud storage providers (e.g., Google Drive, OneDrive, Dropbox).

- Seamless synchronization of documents between the app and cloud storage.

- Support for multi-cloud environments.

Non-Functional Requirements

1. **Performance**

- The app should load documents and search results within 2 seconds.

2. **Security**

- Implement role-based access control (RBAC) to ensure secure document access.

- Data encryption for both in-transit and at-rest documents.

3. **Scalability**

- The app should support a growing number of users and documents without performance degradation.

4. **Usability**

- The user interface should be intuitive and easy to navigate.

- Provide tutorials and help documentation for new users.

5. **Compliance**

- Ensure compliance with local government data protection and privacy regulations.

Open Questions

1. What specific cloud storage providers should we prioritize for integration?

2. How will we handle large file uploads and downloads to ensure performance?

3. What additional security features are required to meet government standards?

4. How will we train and support users during the transition to the new system?
